- VR development (Meta Quest)
- Mobile (Android / iOS), desktop
- Steam distribution
- Hyper-casual design

DATA & AUTOMATION

- Python, data analysis
- Machine learning fundamentals
- n8n workflow automation

CERTIFICATIONS

Data Analyst with Python
2023

Data Science & Machine Learning using Python
LUMS, 2022

LANGUAGES

- Urdu — Native
- English — Fluent

INTERESTS

- Cricket
- Table tennis

SUMMARY

Unity developer with 6 years building interactive games across mobile, desktop, and most recently VR. Comfortable owning a title from gameplay systems and C# architecture through UI/UX and performance optimization, with production experience taking 20+ titles live on Android and iOS. Currently expanding into VR experiences and Python-based data automation.

EXPERIENCE 6 YEARS

Senior Unity Developer

FEB 2024 — PRESENT

ArgonTech — Lahore, Pakistan

- Deliver Unity development for a services-based studio, working directly with client requirements on long-running game builds.
- Shipped three client engagements: Wenet, an AI-powered English-learning game with real-time voice-to-voice NPC conversations and a five-task-type quiz engine; a blockchain integration using the Solana SDK; and a VR painting application.
- Building a long-term kids' road-trip game featuring live map-based location tracking, a car wash and customization system, and multiple embedded mini-games.

Unity Game Developer

JAN 2020 — DEC 2023

Anabitech — Lahore, Pakistan

- Joined a mixed-reality and promotional-games studio as an early hire and helped grow the development team to three.
- Developed 2D and 3D games for Android and Apple, shipping 20+ products across the App Store and Google Play.

Unity Game Developer

MAR 2018 — DEC 2019

Ingenious Concepts — Lahore, Pakistan

- Built a multiplayer card game for a UK-based client, working closely with one fellow developer.

FEATURED PROJECT

Wenet — AI-Powered English Learning Game

Unity 3D game where players hold real-time voice-to-voice conversations with AI-driven NPCs to practice English. Built the full speaking pipeline — voice capture, speech-to-text transcription, AI pronunciation scoring, and lip-synced AI-generated replies — plus a backend-driven quiz engine spanning five task types. Shipped with four-language localization and a runtime performance pass.

EDUCATION

BS, Computer Science

2011

University of Punjab, Lahore

GPA 3.7
